

## Oil & Gas Partnership Brings US-Made Fuel Vapor Pressure Analyzer to Midwest

FOR IMMEDIATE RELEASE

Malta, NY, USA – August 26, 2026

Petroleum Systems Services Corporation (PSSC) and KB Scientific Instruments are delighted to announce their sales partnership that will directly supply Midwestern US fuels operations and laboratories with a highly precise and robust, US-made vapor pressure analyzer.

This collaboration will increase Midwestern awareness of PSSC's **RVP Pro** vapor pressure analyzer via in-person demonstrations of its highly precise measurements and industrial-grade construction. KB Scientific Instruments will also offer simple procurement of RVP Pro, managing the sales process from their headquarters in central Indiana. RVP Pro is an excellent complement to their existing oil & gas instrumentation portfolio, making the KB Scientific Instruments brand more accessible to new laboratory and expansion projects.

Jason Nick, PSSC Product Manager, stated "US lab managers increasingly desire domestic solutions for ensuring that their products meet standard and regionally mandated fuel specifications. I'm thrilled to partner with KB Scientific Instruments to make RVP Pro a tariff-free, made in the USA option for our Midwest vapor pressure testing laboratories".

"We're proud to partner with PSSC and bring the RVP Pro, and the quality behind it, to Midwest laboratories. As a company rooted in the Midwest, it's especially rewarding to offer our customers this reliable, made-in-the-USA solution". – Kevin Batt, Managing Director, KB Scientific Instruments.

PSSC and KB Scientific Instruments look forward to serving the Midwest oil & gas testing sector through a mutually beneficial partnership.

### **About PSSC**

Petroleum Systems Services Corporation, founded in 1993, is a manufacturer and distributor of oil & gas instrumentation, and an ISO 17025 accredited calibration provider. PSSC is well known for their expertise in ASTM methodology for analyzing the volatility of fuels; applying it to professional service and calibration of vapor pressure and flashpoint equipment.

### **About KB Scientific Instruments**

KB Scientific Instruments, based in Fishers, Indiana, provides precision testing instrumentation to petroleum, fuel, gas, lubricant, and energy laboratories throughout the Midwest. As an authorized representative for select manufacturers, KB Sci offers carefully evaluated instruments backed by technical expertise and practical guidance, helping laboratories choose reliable, ASTM-compliant solutions that meet their specific testing and workflow needs.
