

Oil & Gas Partnership Brings US-Made Fuel Vapor Pressure Analyzer to Western US

FOR IMMEDIATE RELEASE

Malta, NY, USA – September 9, 2026

Petroleum Systems Services Corporation (PSSC) and Windward Analytical are delighted to announce their sales partnership that will directly supply the US West Coast and Mountain-region fuels operations and laboratories with a highly precise and robust, US-made vapor pressure analyzer.

This collaboration will increase Western-US awareness of PSSC's **RVP Pro** vapor pressure analyzer via in-person demonstrations of its highly precise measurements and industrial-grade construction. Windward Analytical will also offer simple procurement of RVP Pro, managing the sales process from their West Coast and Mountain-region sales offices. RVP Pro is an excellent complement to their existing oil & gas instrumentation portfolio, making the Windward Analytical brand more accessible to new laboratory and expansion projects.

Jason Nick, PSSC Product Manager, stated "US lab managers increasingly desire domestic solutions for ensuring that their products meet standard and regionally mandated fuel specifications. I'm thrilled to partner with Windward Analytical to make RVP Pro a tariff-free, made in the USA option for our Western-US vapor pressure testing laboratories".

"We at Windward Analytical are excited to add PSSC's RVP Pro to our portfolio of world-class oil & gas analyzers. Vapor pressure continues to be one of the most monitored physical properties of gasoline for ensuring product safety, performance, regulatory compliance, and profitability. RVP Pro allows us to provide accurate and reliable vapor pressure equipment to producers on the West Coast, manufactured by vapor pressure experts on the East Coast." - Don Crider, Owner, Windward Analytical.

PSSC and Windward Analytical look forward to serving the Western-US oil & gas testing sector through a mutually beneficial partnership.
